Warsaw Gladiolus Gardens

Kenneth J. Lindsey
Warsaw - Indiana

Greetings, Glad Lovers.

As another Glad season arrives, I am happy in taking this opportunity to thank my customers for their past patronage and to extend a personal invitation to all flower lovers to give my wares a trial.

The large number of advance orders which have come thus far this season, assures me that my efforts to "Do unto others as I would be done by," have not been unappreciated.

My Glad bulbs this season are the finest I have ever had. Clean, healthy, disease free, high crowned and full of vigor! They have everything that is necessary to produce prize winning spikes. As a precautionary measure only, every bulb was treated before being planted and the harvesting, cleaning, etc., was all done by hand, greatly reducing the possibilities of damage and mixtures as well as the entry of disease.

I do my best to prevent mixing and other troubles in harvesting but, as you know, "to err is human." Should I make an error, however small, please notify me and I will see that it is promptly rectified for YOU MUST BE SATISFIED.

Remember that in every sale I make, I GUARANTEE SATISFACTION.

I respectfully submit the list of Glads in this booklet for your consideration and approval, and I trust that you will be pleased with the wide range of choice varieties and types, all of which are priced within easy reach of everyone.

Believing that you will approve, and give favorable consideration to my offers, I am

Sincerely yours,

Kenneth J. Lindsey

Cultural Directions.

Open your packages of Glads as soon as received to allow air to circulate through them, and place in a cool cellar until planting time.

Glads may be planted as soon as danger of frost is past, and may be planted at intervals of several weeks until July 1, thus furnishing a succession of blooms until late in the fall.

Any good garden soil will grow fine Glads. Never use fresh manure at planting time. Any good potato fertilizer will give good results on almost any kind of ground, however I would advise you to get in touch with your County Agent concerning what fertilizer is best for your particular soil.

Spade the soil deep and pulverize thoroughly. Bulbs can be planted four inches deep and over in mellow soils, and four to eight inches apart in the row.

Keep the soil well worked in the rows and keep all weeds down. In a dry season water the Glads once a week, and give them a real soaking. Stir the ground the next forenoon, if dry enough, but never while it is wet.

For cut flowers, cut the spike when the first bloom opens. Always leave, at least, four leaves on the plant to mature the bulb. When the leaves turn brown in the fall, lift the bulbs and cut the tops off close to the bulb. Leave in the sunshine two or three days, or in a well ventilated building, to cure. Then store in a cool, dry cellar. Several weeks later you can remove the bulblets, roots and the old bulb easily and store away the cleaned bulbs in boxes not over four inches deep.

Always be careful in labeling your bulbs when you plant and store them.

Your questions concerning any phase of Glad growing are welcome and I will answer them to the best of my ability.

“There is a lesson in each flower,
A story in each stream and bower;
On every herb o'er which we tread
Are written words which rightly read,
Will lead us from earth's fragrant sod,
To hope, and holiness, and God.”
